Out System

This Rapid Application development (RAD) platform provides our clients with highly productive enterprise applications. Our skilled developers manage applications with speed and ease through out system.

Warehousing/BPM

We provide BPM service to efficiently control the processes in an organization. It is an essential tool for business to organize or improve its outcomes beforehand.

Portal/EPCM

Our software EPCM focuses on the strategies that capture and accurately deliver information related to business organizations. Our main aim is to improve organizational effectiveness.

App. Development

Applications are the face of tomorrow's digital world. All major technological platforms require applications. Our expert programmers can develop application development solutions for all your software.

PLM / IOT

We provide PLM and IOT, keeping up with the latest trends in technology. We ensure our client's products gain maximum visibility and achieve its high performance.

Engineering services are all about Innovation and development

For over a decade, we provide our clients with the top-rated engineering services. We offer embedded, digital and mechanical engineering services. The world of Engineering is ever expanding producing product solutions that help and assist daily living such as AI, mechatronics and Nano technology. We keep up with the growing trends.

OUR ENGINEERING SERVICES INCLUDE:

1. PRODUCT DESIGN

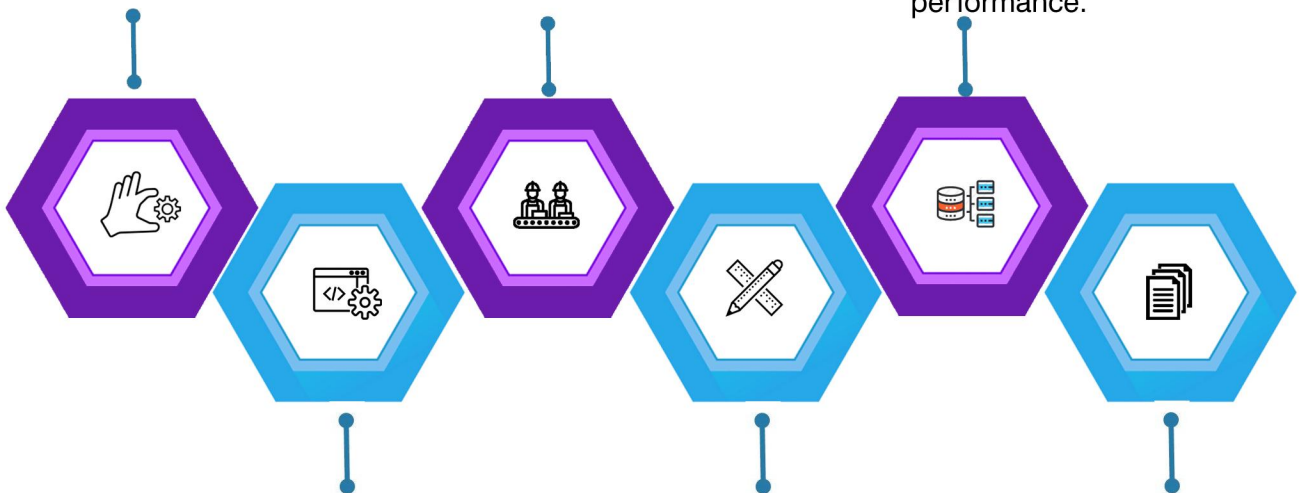

Our engineers focus on continuous evolution alongside technology. We provide unique, personalized and environment-friendly engineered products.

2. DESIGN VALIDATION AND VIRTUAL SIMULATION

The software virtual simulation aids product engineers from all industries. Considering the importance of the product value, we provide our clients with accurate, tested designs using the software.

3. MANUFACTURING ENGINEERING

Our Manufacturing Engineers follow a process to develop a functional outcome. It starts with designing then selecting the right technology, and overseeing the plan, overall design and its performance.

4. REVERSE ENGINEERING AND VAVE

Our product-centric engineering approach focuses on redesigning products to client's requirements, creating and overseeing functionality of a new product and analyzing an existing product for better performance, reducing costs and adding value.

5. AUTOMATION

We provide automation engineering services with the future in mind as companies focus more on technologically supported automated processes. We service large industries who deal with vast amount of data.

6. DATA MIGRATION AND TECH PUBLICATION

We provide companies with easy data migrations without involving any severe impact on the overall system performance. Our technical publication group provides comprehensive technical documented solutions on developing Engineering documentation.

Digital Marketing works with an act of focus and precise targeting

We provide Marketing services for companies and manage online marketing. The marketing world is ever-changing with the growing number of strategies developed to market online and the updated smartness of machines. Our team of individually skilled marketers follow a step-by-step procedure to achieve business goals. The first step would be identifying the pain point of the company and then address the issue or provide a major Digital marketing breakthrough to improve online presence.

DIGITAL MARKETING SERVICES INCLUDE:

SEO Strategy

Site optimization for search engines is one way to improve organic traffic to a webpage. We implement various strategies which includes keyword research, backlink popularity, developing the right content and adding the apt tags and descriptions.

Content Marketing

Our content marketing process manages the marketing aspect of digital content. Our marketing policy decides which social platform will be the best to market, by taking into consideration the amount of traffic that comes in based on the search results of the client's product.

PPC Management

Unlike looking to improve organic traffic to a website, PPC management is inviting traffic through paid advertising. We manage the keyword, ad campaigns, the bidding process and monitor the growth of the general traffic to the client's site and improve quality of the overall ad placements.

E-mail Marketing

It is one of the most-effective marketing strategy ever invented on the digital platform to reach out to prospects and customers looking for help. It can be a personal outreach or a bulk approach to various companies. We provide all the basic forms of e-mail marketing for your company.

Asset Management

We take care of solutions pertaining to manage large spaces of property on a regular basis, after having first evaluated the premises. We also manage the parking situations of large companies providing innovative technology-driven solutions, providing innovative solutions that aim at reducing costs and managing peak- hour crisis.

ASSET MANAGEMENT SERVICES INCLUDE:

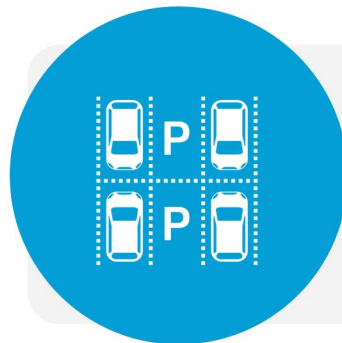

PROPERTY MANAGEMENT

We provide services that take care of the daily responsibilities of your property. We can handle operations, maintenance, repairs, handle records of the budget, filing taxes and overseeing the rent, contributing to the overall management of your property.

PROPERTY MAINTENANCE

Our maintenance contract service provides our client with complete maintenance. It includes all basic requirements of maintaining a property from general cleaning of the property to overseeing its repairs and maintaining the gardens or space surrounding it.

PARKING MANAGEMENT

Our parking management follows a certain policy, to maintain the limited parking space using technological advancements. With our advanced parking management facility, there will be no parking - related problems.

Staffing Solutions

To find the right skilled employees for multi-national companies can be time-consuming and a tiring process. We provide a simple solution that involves hiring the right fit after a careful and structured evaluative process.

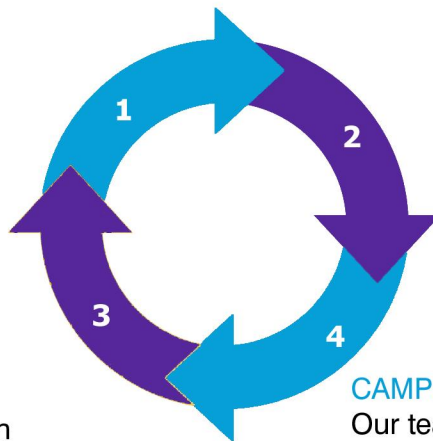

OUR STAFFING SERVICES INCLUDE:

PERMANENT STAFFING:

Our talented recruiters provide clients with access to the right kind of people, with the necessary skillset for the required permanent position. It is a step by step process from reviewing the resumes to identifying the right candidate for different kinds of jobs in various companies.

CONTRACT STAFFING

We recruit the right talent for a contract period based on the requirements of the client. It is considered most effective way of recruiting since it is cost-effective for the employer and also serves as an opportunity to find the right candidate for hire.

ON-SITE RECRUITMENT

Our recruiting team works within the premises of the company, learning more about what the company requires in their employees. We provide unlimited top notch service by being in the company's premises and recruiting on their behalf.

CAMPUS RECRUITMENT

Our team of recruiters also undertake campus requirement, for those companies on the lookout for fresh talent. The graduates who will be recruited will have to undergo a series of screening tests to which would bring out the best talent among them.

Technological Consulting

The present digital world requires all businesses to be up-to-date and technologically driven, we consult companies on technological advancements. It is deemed a necessity for the company's sustainability and growth. Technology as it is never stops growing, it continuously evolves and so the need arises for companies to be attuned to the latest change in technology.

This is possible by a tech expert advisor who is capable to guide the growth of the company. We determine the right technological strategy for your company and target all our innovative solutions to enable the growth. We provide maximum support and innovative solutions during this technological change process.
